Current release baseline

22 October 2026

Scope. This revision governs the current local system. The existing requirement and screen identifiers are retained. Earlier diagrams, endpoint sketches and routing algorithms are historical or deferred wherever they conflict with this baseline.

Navigation. External Google Maps URLs are the selected no-key approach. A user click sends only a published mosque entrance and walking or two-wheeler mode. No embedded map, Google API billing, visitor origin, private contact or route-duration response is involved. Directions work without a scheduled session. The app makes no arrival-time or reachability calculation.

Accounts and trust. Only Admin issues focal credentials; only the responsible focal person issues representative credentials. Contact details are confirmed independently by the issuer. Temporary passwords expire after 24 hours and require a first-login change. No SMS OTP or verified-email recovery is required. Administrator MFA uses free local TOTP and single-use recovery codes. Imam phone-call evidence remains a separate timetable-verification process.

Implementation. React/TypeScript frontend, Express API and a separate worker use persistent MongoDB. Authorization, revisions, audit and outbox writes are enforced on the server. Public responses exclude private contacts. Local ports are 5173 for the frontend and 4000 for the API; production hosting is not provisioned.

Acceptance boundaries. The core local flows have automated and mobile-viewport browser coverage. Large-scale pagination, full Urdu copy review, combined registration resubmission, production recovery/load acceptance and physical old-Android validation remain outstanding. Google API routing and forecasts are deferred. See Documents/CURRENT_SYSTEM.md and backend/docs/IMPLEMENTATION_REPORT.md for the maintained implementation record.

Screen Inventory “DiscoverSalah”

For **DiscoverSalah**, I recommend one responsive website with **four experiences: Public Discovery, Local Representative, Focal Person, and System Admin**. Shared screens should adapt to the person’s permissions.

Below is a comprehensive screen inventory for the documented product. **A page, tab, form, and dialog are different design deliverables—not every item needs a separate URL.** Items marked **Conditional** require a scope decision; **Recommended** items are supporting UX additions.

1. Public discovery and mosque information

Public users should immediately access useful information without creating an account.

ID	Screen/page name	Description and essential behavior	Format
P01	**Home / Find a Jama’at**	Main entry point with “Use my location,” manual location, prayer/date selection, Walking or Motorcycle, and Nearby or Whole City. Show useful discovery controls before promotional content.	Page
P02	**Choose Location**	Select a city and enter location details or use permission-based device coordinates. Precise location stays in memory. No geocoding API or interactive pin map is enabled; browsing remains possible without a precise origin.	Sheet / page
P03	**Search Results**	Mosque/session cards show Jama’at time, date, area and timing status. No route duration or arrival margin is calculated. Preserve selected filters. Current workspace reads are bounded; complete pagination remains required before larger coverage.	Page
P04	Location Results and External Navigation	Keep the same result selection and venue cards, using a location list instead of simulated map geography. A selected published mosque opens the external directions screen. No embedded map SDK, tiles or clustering is loaded in the current release.	Results view

ID	Screen/page name	Description and essential behavior	Format
P05	**Search Filters and Sorting**	Prayer, date, neighborhood, scope, travel mode, and applicable sorting. Explain when journey ranking covers only the evaluated results.	Sheet / panel
P06	**Whole City Discovery**	Searches participating venues throughout the selected city without the Nearby distance cap. Clearly identifies partial coverage and allows distant Friday/Eid venues to appear.	Search mode
P07	**Friday Prayer Finder**	Focused discovery for Jumu'ah with multiple sessions, separate Khutbah/Jama'at times, date, and confirmation status. Reuses the results layout.	Filtered results
P08	**Eid Prayer Finder**	Dated Eid sessions, including associated prayer grounds. Clearly distinguishes provisional dates, confirmed sessions, venue changes, and cancellations.	Filtered results
P09	**Mosque / Venue Details**	Shareable public page containing name, address, entrance, schedules, verified facilities, maintenance status, notices, and issue-reporting action. Private Imam numbers remain hidden.	Page
P10	**Full Timetable**	Daily timings, upcoming effective changes, dated exceptions, Friday sessions, and Eid sessions. Clearly distinguishes Jama'at from prayer-beginning or sermon times.	Detail tab
P11	Session Details	Explain the selected congregation date/time and timing evidence. Link to directions while explicitly stating that DiscoverSalah does not calculate travel duration or an arrive-before-Jama'at estimate.	Page / detail sheet
P12	Travel Mode Selection	Choose Walking or Motorcycle for the external navigation URL. Preparation-margin calculations are deferred. Use walking or two-wheeler; do not silently substitute driving or bicycling.	Sheet
P13	**Directions Handoff**	Open Google Maps only after a click, using api=1, validated published entrance coordinates and walking/two-wheeler mode. Omit visitor origin, contact	Action / dialog

ID	Screen/page name	Description and essential behavior	Format
		data and keys; use opener/referrer protection. No timetable/session is required for this screen. Revalidate app data on return.	
P14	**Future Departure Planner — Conditional**	Select a future departure for a dated session. Label estimates as forecasts and explain when predictive traffic is unavailable.	Planning panel
P15	**Timing Status Explained**	Explains identity verification, representative reconfirmation, phone verification, stale information, pending changes, and disputes in plain language.	Help sheet
P16	**Participating Areas and Coverage**	Shows supported cities/areas and explains that “Whole City” covers participating venues. Provides missing-mosque and contributor actions.	Page

Design recommendation: Nearby, Whole City, Friday, and Eid should share one discovery system. They need distinct states and entry points, but four independently built search products would create unnecessary complexity.

2. Community notices and public requests

ID	Screen/page name	Description and essential behavior	Format
C01	**Mosque Notice Board**	Approved, active notices for a mosque: religious events, mosque services, and verified death/Janazah announcements. Keep it attached to mosque details initially.	Detail tab
C02	**Announcement Details**	Public title, relevant details, actual venue, event date/time, and status. Show only permitted personal information. Janazah notices do not automatically receive reachability estimates.	Page
C03	**Report Incorrect Information**	Report a timing, location, duplicate listing, or other problem. Prefill the mosque/session being reported and explain that submission starts a review.	Form

ID	Screen/page name	Description and essential behavior	Format
C04	**Suggest a Missing Mosque**	Collect mosque name, city/area, address or pin, and optional private contact. Present possible existing matches before submission.	Form page
C05	**Become a Community Contributor**	Explain Local Representative and Focal Person duties, time commitment, approval process, and the initial voluntary operating model.	Page
C06	**Contributor Application**	Collect requested role, area, mosque affiliation, availability, private contact, reference, and permission to contact. An application grants no management access.	Form page
C07	**Submission Receipt**	Confirm successful submission and show a reference plus a secure status-access method. Do not imply that a mosque has been published or a role approved.	Shared confirmation
C08	**Track My Request**	Shows permitted status information for the visitor's own request using secure access. Internal verification notes and other applicants' information remain hidden.	Page
C09	**Application Decision / Withdrawal**	Explains approval with next steps, waiting-list status, or rejection. Allows an applicant to withdraw where applicable.	Tracking view / dialog

Important distinction: "Suggest a mosque" and "Apply to help maintain an area" should remain separate actions. Someone reporting a missing mosque should not have to volunteer.

3. Management access and shared account screens

These screens serve all three management roles with permission-aware variations.

ID	Screen/page name	Description and essential behavior	Format
A01	**Management Sign In**	Sign in with the issuer-confirmed contact number and password. Administrator completes MFA; temporary-password users change their password before workspace access. Public discovery remains accessible.	Page

ID	Screen/page name	Description and essential behavior	Format
A02	Issued Credentials and First Password Change	The authorized issuer privately provides a generated temporary password valid for 24 hours. Sign in, then change it before management access. No invitation token or SMS OTP activation is required; the legacy invitation page explains the issuer process.	Page
A03	**Admin Second-Factor Verification**	Administrator only: verify a time-based authenticator code or unused recovery code after password sign-in. Codes are checked locally with no SMS/email provider fee.	Page
A04	**Request Account Recovery**	Explain issuer-assisted reset: representative contacts the responsible focal person; focal person contacts Admin. Identity/contact are independently checked. Administrator recovery uses offline recovery material or a controlled operator process.	Page
A05	**Reset Password / Recovery Completion**	An authenticated owner enters the current/temporary password and a new private password. A successful change revokes prior sessions and requires sign-in again. An issuer reset creates another 24-hour temporary password.	Page
A06	**My Account and Security**	View personal details, assigned role/scope, and change password. Users cannot promote themselves or change their own assignment.	Page
A07	**Notifications**	In-account submissions, decisions, urgent work, and assignment changes. Each notification links to the relevant item; marking it read does not resolve its task.	Page / panel
A08	**Access Unavailable**	Explain deactivation, removed assignment, missing permission, or pending activation without exposing restricted records.	System page
A09	**Session Expired**	Request sign-in again and restore the intended destination where safe. Avoid storing sensitive drafts insecurely.	Dialog / page

4. Local Representative workspace

The Representative's main job is to maintain assigned records accurately and respond to review feedback.

ID	Screen/page name	Description and essential behavior	Format
R01	**Representative Dashboard**	Prioritize records needing confirmation, returned submissions, pending reviews, upcoming events, and unresolved assigned issues.	Page
R02	**My Mosques and Venues**	List assigned mosques/prayer grounds with publication, timetable, and maintenance status.	Page
R03	**Mosque Management Overview**	Workspace for one mosque with profile, schedules, contacts, notices, submissions, and history.	Page
R04	**Register Mosque / Associated Venue**	Guided registration covering identity, location/entrance, area, Imam contact permission, facilities, and initial timetable. Flag possible duplicates.	Multi-step form
R05	**Edit Mosque Information and Facilities**	Maintain allowed public fields. Identity changes follow review rules; unknown facilities remain explicitly unknown.	Form / tab
R06	**Private Imam Contact / Request Contact Change**	View authorized contact details and propose a replacement with supporting independent reference information. The new number cannot verify itself.	Restricted tab / form
R07	**Daily Timetable Editor**	Enter mosque-specific congregation times and effective dates. Clearly separate currently approved values from proposed changes.	Form page
R08	**Dated Overrides and Exceptions**	Enter a date-specific timing change or cancellation, showing precisely which prayer/date it affects.	Schedule tab
R09	**Friday and Eid Session Manager**	Manage multiple sessions, separate sermon times, provisional/confirmed dates, associated venues, and cancellations.	Schedule tab

ID	Screen/page name	Description and essential behavior	Format
R10	**Review and Submit Changes**	Show an old/new comparison, affected sessions, effective date, and reason before submission. Explain what remains public while review is pending.	Review step
R11	**My Submissions**	Filter by pending, approved, returned, rejected, and superseded. Distinguish an approved future schedule from one already effective.	Page
R12	**Submission Details / Correct and Resubmit**	View the exact submitted version and reviewer feedback. A correction creates a new version and invalidates the old review target.	Page
R13	**Confirm Timings Unchanged**	Confirm specified approved timings without editing them. Clearly state that this records representative confirmation, not a new Imam phone verification.	Dialog / form
R14	**Manage Mosque Notices**	List drafts, pending, published, expired, and canceled notices for assigned mosques.	Tab / page
R15	**Create / Revise / Cancel Notice**	Capture category, public content, venue/time, expiry, and private source evidence. Material revisions return for approval.	Form
R16	**Assigned Issues and Follow-up**	View relevant reports and provide factual corrections through the proper workflow. Representatives do not acquire independent approval authority.	Page
R17	**Mosque Activity History**	Read-only history of submissions, confirmations, decisions, and assignments, limited to authorized records.	Tab

5. Focal Person workspace

This workspace should be **task-oriented**: what needs verification, how urgent it is, and what evidence is missing.

ID	Screen/page name	Description and essential behavior	Format
F01	**Focal Person Dashboard**	Urgent reviews, overdue tasks, stale schedules, reports, and maintenance gaps within assigned areas.	Page
F02	**Review Queue**	Combined queue for registrations, timetable changes, identity/contact changes, and notices. Filter by type, urgency, mosque, and due status.	Page
F03	**Mosque Registration Review**	Verify identity, entrance, representative relationship, Imam contact, and initial schedule. Publication requires the complete required approvals.	Review page
F04	**Timing Change Review**	Side-by-side old/new timings, affected dates, representative details, exact version, and registered Imam contact. Record phone verification before approving.	Review page
F05	**Record Verification Call**	Record who was contacted, when, which version was checked, outcome, and private notes. Unreachable or inconclusive results remain unresolved.	Embedded form
F06	**Return / Reject Submission**	Require actionable reasons and explain the effect on publication. Show confirmation before applying the decision.	Dialog
F07	**Contact / Identity Change Review**	Check sensitive mosque identity or contact changes using an established contact or independently verified authority.	Review variant
F08	**Announcement Review**	Review content, venue/time, expiry, privacy, and source evidence. Sensitive death/Janazah notices need the specified confirmation.	Review variant
F09	**Area Mosques and Data Quality**	Identify unmaintained venues, stale schedules, expiring confirmations, and upcoming events requiring checks.	Page
F10	**Local Representatives**	View scoped representatives, assigned mosques, activation status, and outstanding maintenance work.	Page

ID	Screen/page name	Description and essential behavior	Format
F11	Create Representative Credentials and Assign	The responsible focal person creates representative credentials only within their areas after independent identity/contact checks. Show the temporary password for private handoff; assign mosque responsibility through authorized commands. No SMS OTP is required.	Form
F12	**Public Reports Queue**	Group duplicates and prioritize timing/location issues. Keep public allegations separate from verified findings.	Page
F13	**Report Investigation and Resolution**	Record investigation, mark a specific schedule scope disputed when justified, resolve/dismiss with reasons, or escalate. Corrections still use approved workflows.	Page
F14	**Missing-Mosque Suggestions**	Assess suggestions, link existing listings, start onboarding, or close with a reason.	Page / queue tab
F15	**Urgent Work and Escalation**	Handle time-sensitive updates, record escalation, and show authorized backup ownership. No response never means approval.	Queue view
F16	**Area Review History**	Read-only record of decisions, call outcomes, and changes within assigned scope.	Page / tab

Critical UX rule: The “Approve” action should be unavailable when the reviewed version has changed, the person lacks current authority, or the reviewer authored the submission.

6. System Admin workspace

ID	Screen/page name	Description and essential behavior	Format
S01	**Service Overview Dashboard**	Coverage, maintained mosques, pending/overdue reviews, unresolved issues, and notification failures. Emphasize operational health.	Page
S02	**Cities and Areas**	Manage participating geography and city membership used by Whole City discovery. Show responsibility gaps before expanding coverage.	Page

ID	Screen/page name	Description and essential behavior	Format
S03	**Focal Persons**	Invite, view, suspend, and manage Focal Person accounts and area assignments.	Page
S04	**Focal Person Details and Assignment**	Review workload, active scope, coverage, and assignment history; make authorized changes.	Page
S05	**Management Accounts**	Search scoped accounts, inspect authority, deactivate access and perform authorized resets/contact changes. Admin creates focal credentials; the responsible focal person creates representative credentials. Session revocation accompanies resets and contact changes.	Page
S06	**Contributor Applications**	Queue of submitted, awaiting-checks, waitlisted, approved, rejected, or withdrawn applications.	Page
S07	**Application Assessment**	Record contact/reference checks, availability, suitability, role, scope and disposition. Approval alone grants no authority. The appropriate issuer subsequently creates credentials under the admin-to-focal and focal-to-representative hierarchy.	Page
S08	**All Mosques and Venues**	Cross-area oversight of published, pending, suspended, and maintenance-pending venues. Reuse the mosque workspace.	Page
S09	**Reassignment and Backup Coverage**	Replace maintainers, appoint authorized temporary cover, and transfer outstanding responsibilities. Preserve history and remove former access.	Form / page
S10	**Escalated Reviews and Reports**	Handle unattended work and exceptions through the same evidence and independence rules as normal review.	Queue
S11	**Duplicate Listing Assessment**	Compare suspected duplicates, designate the appropriate listing, and resolve linked suggestions/reports. Avoid destructive automatic merging.	Review view

ID	Screen/page name	Description and essential behavior	Format
S12	**Maintenance and Coverage Reports**	Examine freshness, correction delays, workload, and areas lacking active maintainers. Support rollout decisions.	Page
S13	**Audit History**	Filter accountable changes by actor, record, action, version, and date. Routine users cannot edit audit entries.	Page
S14	**Notification Delivery Failures**	Inspect failed delivery work and support controlled retry/escalation. Approval state remains separate from notification delivery.	Operations view
S15	**Operational Policy Settings — Recommended**	If settings need a UI, restrict changes to approved thresholds, review targets, and related operating policies; audit changes. A dedicated page can wait if managed configuration is sufficient.	Optional page

Practical boundary: Hosting, backups, deployments, and technical monitoring need operational procedures, but they do not all need custom DiscoverSalah admin pages. Existing infrastructure tools can handle those duties.

7. Supporting information pages

These are recommended supporting pages; several can share a simple content template.

Screen/page name	Description
About DiscoverSalah	Purpose, participating coverage, community maintenance model, and free initial service.
How DiscoverSalah Works	Explain discovery, timing verification, travel estimates, and the responsibility of each role.
Help / FAQs	Explain Whole City, missing results, timing labels, motorcycle support, location permission, and reporting errors.
Contact and Support	Provide the actual supported contact route and realistic response expectations. Do not imply live support without staffing.
Privacy and Location Use	Explain private contact handling, origin processing, external provider disclosure, and approved retention practices.

Screen/page name	Description
Terms of Use	Set appropriate service-use expectations and explain that arrival estimates are not guarantees.
Contributor Guidelines	Duties, permitted actions, verification standards, privacy, and escalation procedures.
Accessible Use / Accessibility Help	Explain supported ways to use the service and how to report accessibility problems.

Legal/policy wording should be finalized separately; these are page requirements, not completed policies.

8. Essential states and dialogs

These must appear in the design files and testing plan. Most are states within existing screens.

State or dialog	Required experience
Location permission denied	Offer manual location/pin selection immediately.
Origin not selected	Allow timetable browsing; explain why personal travel estimates are absent.
No participating mosques	Explain the coverage gap and offer suggestion/contributor actions.
No matching upcoming sessions	Retain selected prayer/date; offer explicit filter changes without silently switching prayer.
Travel estimates loading	Keep timetable results visible while estimates load.
Route unsupported or unavailable	Show timings and a reason; withhold a positive reachability label.
Map unavailable	Preserve list results and address information.
Partial route evaluation	Identify which results have been evaluated; avoid claiming a global shortest-journey ranking.
Offline / connection lost	Identify potentially stale content and stop live reachability claims.

State or dialog	Required experience
Timing under review / stale / disputed	Explain the specific affected session and why confidence is reduced.
Provisional Eid date	Keep planning information visible with a clear provisional label.
Session started or canceled	Remove it from upcoming recommendations and explain its status on a directly opened detail page.
Maintenance pending	Retain useful location information while clearly limiting timing confidence.
Version conflict	Explain that someone submitted a newer version; require reload and renewed review.
Imam unreachable	Record the attempt, retain pending status, and provide follow-up/escalation.
Possible duplicate	Show potential matches before creating another record.
Validation error	Give field-specific instructions while retaining safe entered information.
Unsaved changes	Confirm before leaving an edited form.
Submission outcome uncertain	Check the result before retrying; avoid duplicate proposals or decisions.
Rate limit reached	Explain when to retry without losing the user's safe form inputs.
Expired invitation / tracking access invalid	Provide a safe recovery path without revealing private information.
Access revoked during work	Stop protected actions and explain that permissions changed.
404 / temporary service error	Provide a useful return path and retry option.

9. Features that should not become initial-release pages

Keep the following outside the initial design backlog:

Potential feature	Treatment
Subscription plans, checkout, wallet, payroll	Outside the agreed initial scope.
Donation collection or funding-organization portal	Future funding is an organizational activity; a transactional portal is not currently justified.
Imam dashboard	No Imam login is required; verification happens through calls.
Public account dashboard	Anonymous discovery and secure request tracking meet the current requirements.
Social feed, comments, ratings, public posting	Outside the limited, verified notice-board model.
In-app chat or automated phone calling	Not part of the documented verification workflow.
Native mobile onboarding/screens	Design the responsive website first.
Full-trip “mosques along my route” planner	Separate future feature; current discovery starts from a selected origin.
Janazah reachability calculator	Requires separately approved structured-session rules.
Automated WhatsApp/SMS alerts	Deferred pending a funded, verified delivery channel.

Language selection and Urdu layouts should be designed as **conditional variants across the whole interface**, not as a separate collection of pages.

Recommended design order

1. **Public discovery → mosque details → session estimate → directions.**
2. **Representative timetable update → Focal Person verification → public timing refresh.**
3. **Mosque registration → approval → publication.**
4. **Reports, missing-mosque suggestions, and contributor applications.**
5. **Notices, account administration, reassignment, and operational oversight.**

Start by prototyping those first two journeys end to end. They will expose the most important usability risks: whether a traveler can find trustworthy information quickly, and whether mosque staff can keep that information accurate.
